Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to a method and apparatus for measuring the thickness of a film layer on a substrate comprising a first conduit for discharging a jet of a light-transmitting liquid towards the film layer, a light emitter for emitting light toward the film, and a receiver for receiving light reflected from the film layer, classified in class 356, subclass 630.
 - II. Claim 18, drawn to an apparatus for polishing a substrate comprising a turntable having a polishing surface and an axis for rotation, the turntable having an optical path including a proximal end opening in the polishing surface and extending axially and a distal end opening in the polishing surface at the predetermined radial position so that the light from the light emitter is introduced into the optical path through the proximal end, lead to the distal end directed to the film and the light reflected from the film is returned to the proximal end to exit the optical path to enable the optical receiver to receive the reflected light, classified in class 451, subclass 6.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the Patentability of the

combination does not rely on the details of the subcombination. The subcombination has separate utility such as a turntable in a dynamic information storage or retrieval system.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. Nils E. Pedersen on 1/10/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2877

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoa Q. Pham whose telephone number is (703) 308-4808. The examiner can normally be reached on 6:30 AM to 5 PM, Monday through Thursday.
